

Deploy DEV@Deakin App

This task provides you with experience in deployment, as we will use a hosting site to deploy your DEV@Deakin web platform and make it live on the Internet.

Complete the following:

1. Complete the Task Requirements.
2. You will find “Topic Videos and Demo Videos” of Week 9 on the SIT313 CloudDeakin site particularly useful as a reference for this task.
3. Create a 2 – 4 minute video where you provide a walkthrough of your code and solution, demonstrating your understanding of the concepts. Upload your video to [Panopto](#).
4. Create a short report that includes:
 - a. A link to your hosted DEV@Deakin platform.
 - b. Explanations of which features (if any) you had to disable/remove when hosting your DEV@Deakin web platform, and *why*. See section **Considerations When Hosting** for details.
5. **Upload** to OnTrack and **engage with feedback** to get this complete!

Task Requirements

Before completing this task, ensure you have completed all previous Pass and Credit tasks, and that your DEV@Deakin web platform has all the previous requirements and design criteria implemented successfully.

For this task, take your latest DEV@Deakin web platform you submitted for Task C1 and deploy it online using a free hosting service. Some options include:

- [Netlify](#)
- [Heroku for Students](#)
- [Vercel](#)

- [Cloudflare](#)

There are many hosting options available, and you are welcome to explore and choose one that best suits your chosen technology stack that you have used to develop your DEV@Deakin web platform.

Limit your choice to a Free option – there is no expectation that you pay for one.

Considerations When Hosting

In previous tasks we recommended additional technologies to explore to help expand your knowledge with frontend web development. As a consequence, your DEV@Deakin web platform may differ slightly which may impact how you host your web platform online.

For example:

- You opted to use [Vite](#) or [NextJS](#) as your React framework instead of the now out-dated *create-react-app* package.
- You implemented a third-party user authorisation and authentication provider like [Clerk](#) or [Firebase](#).

Depending on your chosen technology stack used, it may dictate which hosting platform is available to you. For example, Vercel is intended only to host NextJS-based platforms, thus you would not be able to host a Vite-based DEV@Deakin solution.

If required, you are allowed to disable certain features of your DEV@Deakin web platform to be able to host it on your chosen hosting platform. For example, perhaps you implemented user authorisation and authentication using Clerk – however to get this to work on a hosting platform like Netlify may not be possible. In this scenario, you could disable/remove any Clerk-related code from your solution.

However, the core pages and features of your DEV@Deakin web platform must remain, such as the home page with the Portfolio section, Articles/Tutorials section, the Login and Sign-Up pages, and so on.

If you encounter challenges, please raise them on the SIT313 Teams channel to create a discussion and receive assistance.

Available Resources

We have many resources to assist in your learning journey – if you are ever unsure then please reach out to us, we are always happy to help.

- **The SIT313 Teams channel** – an active learning resource with weekly announcements from the Unit Chair, and regular discussions/assistance from the SIT313 teaching team and students.
- **Seminars** – you can attend both on-campus and online sessions, and join as many as you like each week. Your tutors will provide demonstrations and assistance to help guide your learning.
- **SIT313 CloudDeakin** – contains a large collection of text and video resources.
- **Announcements** - Keep an eye on your email and any announcements made in the SIT313 Teams channel.

Caution: Acceptable use of Artificial Intelligence

It is acceptable to use AI as a learning tool. However, you can **never** ask AI to write code to complete some/parts of this task for you: this is cheating because it does not demonstrate that you understand anything. Detection of inappropriate use of AI has a very real consequences, such as failing the task, or even failing the entire unit.
